

## SAFETY SHUT-OFF VALVE INSTALLATION

**\*\*\*It is recommended that a licensed plumber installs the Safety Shut-Off Valve and that pipe joint compound or similar is used on all threaded fittings.**

**STEP 1:** Turn gas off inside light and at external shut off valve.

**STEP 2:** Remove existing gas tip using a 7/16" wrench.

**STEP 3:** Install pre-assembled safety valve/thermocouple into nipple where gas tip was.

**STEP 4:** Install gas tip into barrel coupling at top of safety valve.

**STEP 5:** Turn gas back on at external shut-off valve.

**STEP 6:** Turn the valve inside light to 2 o'clock position, depress plunger (as shown), light the flame and hold plunger down for 10 seconds.
